

Aleksander Figiel

Fullstack TypeScript Engineer

I specialize in full-stack applications built with TypeScript, Vue.js, Node.js and suitable databases, with high-quality code organized in a monorepo, ready for cloud deployment. I enjoy hands-on coding across all layers of a greenfield app from scratch.

I have 8+ years of technical leadership experience, setting architectural direction, mentoring engineers through code reviews and pair programming, owning systems end-to-end from idea to production, and presenting my outcomes to stakeholders.

I care deeply about the user experience of my products, and build tools that enable a great developer experience when translating complex problems into simple code.

Recently, I'm exploring AI engineering and created [chatrag.app](#) - RAG chatbot for files.

birthday	21.04.1987, Poland
address	Warsaw
phone	+48 791 421 067

hobbies	reading, sports, cooking

Programming experience (20 years)

2023.06 - 2026.01	R&D Tech Leader	Statscore , Katowice (hybrid)
2020.02 - 2023.05	R&D Software Architect	RTB House , Warsaw
2019.01 - 2020.01	Senior Software Engineer	McKinsey & Company , Warsaw
2016.04 - 2018.12	Team Lead Developer	frosmo.com , Helsinki / Warsaw
2015.04 - 2016.03	Software Architect	startup co-founder, Wrocław
2011.07 - 2015.03	Software Engineer	fream.pl , Wrocław
2010.02 - 2011.06	Java EE Developer	xantus.tv , Wrocław
2006.09 - 2012.06	MSc Robotics	University of Technology , Wrocław

Skills

frontend	design	Figma
	layout	HTML5, CSS3, Tailwind CSS
	JavaScript	TypeScript (7 years), Vue (6 years), React (2 years), WebSocket
backend	architecture	REST, monolith, microservices, event-driven (RabbitMQ, Kafka)
	database	SQL (PostgreSQL, MySQL), NoSQL (Redis, MongoDB), BigQuery
	JavaScript	Node.js (7 years), Koa.js, Express.js, NestJS
	Java EE	Java Server Pages + Hibernate (5 years)
AI Engineering & Generative AI		RAG, ChromaDB, prompt engineering, MCP, Copilot, vibe coding
Python		FastAPI, LangChain
Google Cloud Platform		Cloud Run, App Engine, Cloud Functions, Pub/Sub, BigQuery, SQL
AWS		Lambda, API Gateway, SNS, S3
testing		Vitest, Jest, Storybook, Playwright
development tooling		Nx, Lerna, Vite, Webpack, VSCode
devops		CI / CD, Github Actions, Gitlab, Docker, Nginx, Sentry, Kibana
other		Git, Bash scripting, C#
certificates		Computer Network Security, Intro to AI (Udemy)
english level		advanced (C1)

Commercial programming experience (15 years, 30+ projects)

2026.02 - current

freelancer at minimal (own company)

Learning AI Engineering, LLMs and Transformer architecture, working as AI Agents Code Evaluator (RLHF).
As a hobby project, I built [chatrag.app](#) - chatbot that summarizes images or big PDFs and suggests prompts

Project: [chatrag.app](#) - chatbot for answering questions over uploaded files using RAG + vector embeddings
Stack: Python, FastAPI, LangChain, ChromaDB, Node.js, Vue.js, PostgreSQL, GCP

2023.06 - 2026.01

R&D Tech Leader

Statscore

Technical Leader for a greenfield project called Collector - a responsive Single Page Application enabling data collection and submission from various sports events to a REST API, with live updates via WebSocket pushing data from RabbitMQ. I designed the architecture, coded most of the critical code, translated business requirements into tickets with PM, delegated work to three developers, collaborated with two QA engineers, ensured code quality through code reviews, users feedback and monitoring with Sentry.

Backend: Node.js, TypeScript

Frontend: Vue 3, TypeScript, Tailwind CSS, Radix UI, Storybook, Playwright

2020.02 - 2023.05

R&D Software Architect

RTB House

Designed and built from scratch a real-time event-sourcing data science system, collecting structured data from mobile apps into a data warehouse optimized for querying and SPA visualization (buckets, A/B testing, audiences, funnels, user retention, ad revenue, custom reports). I set up a monorepo and CI/CD pipeline. The project was architected and initially developed by me; later, I acted as Tech Lead for a three-developer team.

Backend: GCP, BigQuery, Cloud Functions, App Engine, Cloud Engine, Cloud SQL, Node.js, Koa.js, TypeScript
Frontend: Vue 3, TypeScript

2019.01 - 2020.01

Senior Software Engineer

McKinsey & Company

Full-stack engineer (React.js 16, Redux, Node.js) in an international team, building large SPA for modeling business processes as data flows through black boxes. Contributed to devops, Bash scripting and CircleCI.

2016.04 - 2018.12

Team Lead Developer

frosmo.com

Team Lead Developer for a five-developer team, combining technical leadership with hands-on development. Collaborating with multiple PM's to provide new UI features for big e-commerce companies operating on legacy systems (Decathlon, etc.). The largest solution I delivered enabled guest-mode purchases with an AWS-based API. Developed platform extensions enabling the use of modern JavaScript (ES2015+, Node.js).

2015.04 - 2016.03

Software Architect

startup co-founder

Architecting stock market prediction software in a five-person team. I built a secure Linux server from scratch; a Java EE backend with an Angular 1 GUI allowed running instances of an existing proprietary prediction algorithm written in Fortran, with a significant performance boost.

2011.07 - 2015.03

Software Engineer

fream.pl

Developing full-stack Java EE systems with an HTML/CSS frontend generated on the backend (JSP), writing vanilla JavaScript and jQuery, and building ORM queries with Hibernate on top of PostgreSQL.
Co-architecting and developing traffic.naviexpert.pl as a Single Page Application using Leaflet.js.
Bootstrapping and developing full-stack Java EE systems for startups and large enterprises.
