Aleksander Figiel
Tech Lead | Software Architect | Fullstack TypeScript Engineer

I specialize in greenfield full-stack applications built with TypeScript, Vue.js, Node.js and suitable databases, with high-quality code organized in a monorepo, ready for cloud deployment. I enjoy hands-on coding across all layers, from scratch.

I have 8+ years of technical leadership experience, setting architectural direction, mentoring engineers through code reviews and pair programming, owning systems end-to-end from idea to production, and presenting my outcomes to stakeholders.

I value user and developer experience, turning complex problems into simple code.

My own github projects for AI Automation & AI Engineering: vibe-ios-app turns prompts into iPhone apps. I built a Pydantic AI agent forwarding emails: email-routing agents and chatrag.app - chatbot engine for files built with Python, FastAPI, RAG, OpenAI API.

Programming experience (20 years)

2023.06 - 2026.01	R&D Tech Leader	Statscore, Katowice (hybrid)
2020.02 - 2023.05	R&D Software Architect	RTB House, Warsaw
2019.01 - 2020.01	Senior Software Engineer	McKinsey & Company, Warsaw
2016.04 - 2018.12	Team Lead Developer	frosmo.com, Helsinki / Warsaw
2015.04 - 2016.03	Software Architect	startup co-founder, Wrocław
2011.07 - 2015.03	Software Engineer	fream.pl, Wrocław
2010.02 - 2011.06	Java EE Developer	xantus.tv, Wrocław
2006.09 - 2012.06	MSc Robotics	University of Technology, Wrocław

Skills

frontend		
	design & layout	Figma, HTML5, CSS3, Tailwind CSS
	JavaScript	TypeScript (**7 years**), Vue (**6 years**), React (**2 years**), WebSocket
backend		
	architecture	REST, monolith, microservices, event-driven (RabbitMQ, Kafka)
	database	SQL (PostgreSQL, MySQL), NoSQL (Redis, MongoDB), BigQuery
	JavaScript	Node.js (**7 years**), Koa.js, Express.js, NestJS
	Java EE	Java Server Pages + Hibernate (**5 years**)
AI Engineering & Generative AI		RAG, ChromaDB, Claude Code, MCP, Copilot, vibe coding
Python		FastAPI, LangChain, Pydantic AI
Google Cloud Platform		Cloud Run, App Engine, Cloud Functions, Pub/Sub, BigQuery, SQL
AWS		Lambda, API Gateway, SNS, S3
testing		Vitest, Jest, Storybook, Playwright
development tooling		Nx, Lerna, Vite, Webpack, VSCode
devops		CI / CD, Github Actions, Gitlab, Docker, Nginx, Sentry, Kibana
other		Git, Bash scripting
certificates		Computer Network Security, Intro to AI (Udemy)
english level		advanced (C1)

Commercial programming experience (15 years, 30+ projects)

2026.02 - current freelancer at minimal (own company)

Vibe iOS app - turns prompts into iOS apps, automating GitHub setup, AI coding, builds and TestFlight delivery. No own paid Apple Developer account needed until App Store publication. Stack: TypeScript, Supabase, GitHub Actions, Swift.

agent-email-router-next (Next.js, React, TypeScript) / agent-email-router (Python, Pydantic AI) - email routing with Ollama, prompt engineering, tool calling, SMTP integration and interactive visualization.

chatrag.app - RAG chatbot for files, summaries and suggested prompts. I built the Python engine with FastAPI, LangChain and ChromaDB. Stack: Node.js, Vue.js, PostgreSQL, GCP, Stripe (donations).

Learning AI Engineering, LLMs and Transformer architecture; working part-time as AI Agents Code Evaluator with Reinforcement Learning from Human Feedback (RLHF).

2023.06 - 2026.01 R&D Tech Leader Statscore, Katowice

Technical Leader for a greenfield project called Collector - a responsive Single Page Application enabling data collection and submission from various sports events to a REST API, with live updates via WebSocket pushing data from RabbitMQ. I designed the architecture, coded most of the critical code, translated business requirements into tickets with PM, delegated work to three developers, collaborated with two QA engineers, ensured code quality through code reviews, users feedback and monitoring with Sentry.

Stack: Node.js, TypeScript, Vue 3, Tailwind CSS, Radix UI, Storybook, Playwright

2020.02 - 2023.05 R&D Software Architect RTB House, Warsaw

Built a real-time event-sourcing data science system from scratch: mobile app data collection, a data warehouse and SPA analytics (buckets, A/B testing, audiences, funnels, retention, ad revenue, reports). Set up a monorepo and CI/CD, then led a three-developer team.

Stack: GCP, BigQuery, Cloud Functions, App Engine, Cloud Engine, Cloud SQL, Node.js, Koa.js, TypeScript, Vue3

2019.01 - 2020.01 Senior Software Engineer McKinsey & Company,Warsaw

Full-stack engineer (React.js 16, Redux, Node.js) in an international team, building large SPA for modeling business processes as data flows through black boxes. Contributed to devops, Bash scripting and CircleCI.

2016.04 - 2018.12 Team Lead Developer frosmo.com, Helsinki/Warsaw

Led five developers while coding hands-on. Worked with PMs on UI features for large e-commerce companies using legacy systems (including Decathlon). Delivered guest checkout with an AWS-based API and platform extensions supporting modern JavaScript (ES2015+, Node.js).

2015.04 - 2016.03 Software Architect startup co-founder, Wrocław

Architecting stock market prediction software in a five-person team. I built a secure Linux server from scratch; a Java EE backend with an Angular 1 GUI allowed running instances of an existing proprietary prediction algorithm written in Fortran, with a significant performance boost.

2011.07 - 2015.03 Software Engineer fream.pl, Wrocław

Engineering full-stack Java EE systems with an HTML/CSS frontend generated on the backend (JSP), writing vanilla JavaScript or jQuery code and ORM queries with Hibernate on top of PostgreSQL.
Co-architecting and developing traffic.naviexpert.pl as a Single Page Application using Leaflet.js.

2010.02 - 2011.06 Java EE Developer xantus.tv, Wrocław

Developing full-stack Java EE systems for startups and large enterprises.
